A student investigated how the nature of the image depends on the position of the object in front of a large converging lens.

Lenses

The diagram shows one position for the object.

(a) Use a ruler to complete a ray diagram to show how the image of the object is formed.

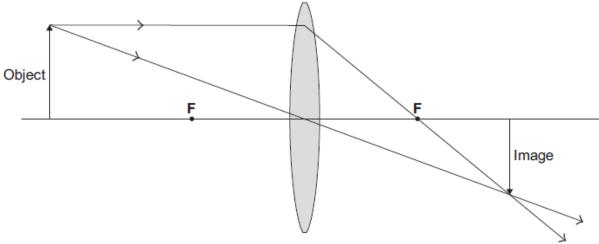

Key: F = principal focus

(4 marks)

(b)	Describe the nature of this image relative to the object.								
		(2 marks							

The diagram shows a lens, the position of an object and the position of the image of the object.

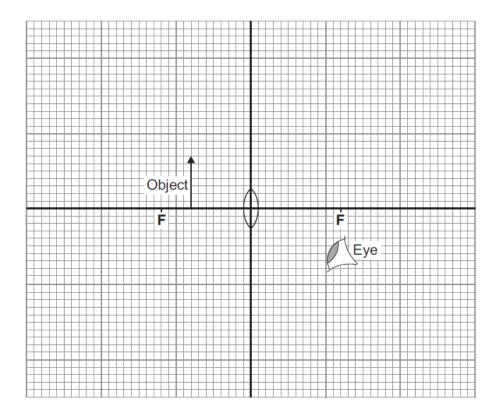

(a)	What type of lens is shown?	
(b)	What is the name of the points, F , shown each side of the lens?	(1 mark)
(c) (i)	The image is real and can be put on a screen.	(1 mark)
(-) (-)	How can you tell from the diagram that the image is real?	
		(1 mark)

(c) (ii) Draw a ring around a word in the box which describes the image produced by the lens.

	upright	larger	inverted
--	---------	--------	----------

(1 mark)

- (a) The diagram shows a converging lens being used as a magnifying glass.
- (a) (i) On the diagram, use a ruler to draw two rays from the top of the object which show how and where the image is formed. Represent the image by an arrow drawn at the correct position.

(3 marks)

(a) (ii) Use the equation in the box to calculate the magnification produced by the lens.

magnification =
$$\frac{\text{image height}}{\text{object height}}$$

Show clearly how you work out your answer.		
	Magnification =	
		(2 marks)

b)	A camera also uses a converging lens to form an image.																															
	Describe how the image formed by the lens in a camera is different from the image formed by a lens used as a magnifying glass.

(a)	Different sha	ned lenses ar	e used to	correct diff	ferent types of	eve defect
(a)	טוווכו כווג אווכ	ipeu ielises ai	e useu io	COLLECT ALL	iciciil lypes oi	eye delect.

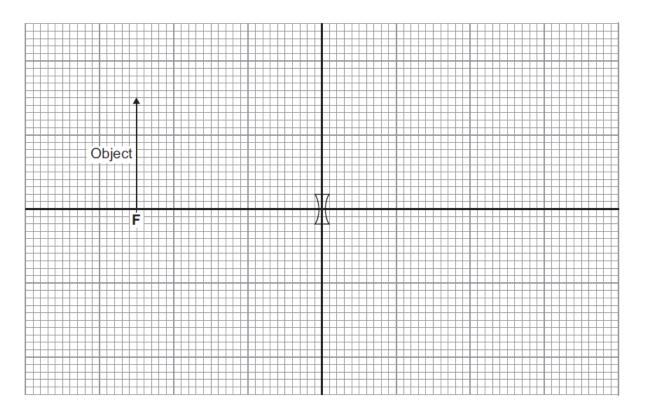

The diagram shows the type of lens used to correct a defect called short-sight.

What name is given to a lens with this shape?	
	(1 mark)

- (b) The diagram below shows the positions of an object and a lens. The lens is represented by a vertical line. Someone looking through the lens can see an image of the object.
- (b) (i) On the diagram, use a ruler to draw two rays from the top of the object, to show how and where the image is formed. Use an arrow to represent the image. The arrow should be drawn to the correct size and at the correct position.

(The diagram is on the next page)

(3 marks)

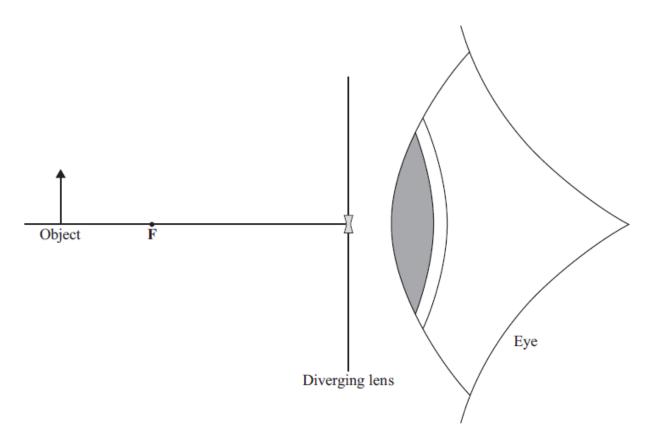

(b) (ii) Use the equation in the box to calculate the magnification produced by the lens.

	Show clearly how you work out your answer.	
	Magnification =	
	g	(2 marks
(b) (iii)	This type of lens always produces a virtual image.	
	How can you tell from the completed ray diagram that this image is virtual?	
		(1 mark)

(b)

The diagram shows an object located vertically on the principal axis of a diverging lens. A student looks through the lens and can see an image of the object.

(a) Using a pencil and ruler to draw construction lines on the diagram, show how light from the object enters the student's eye and the size and position of the image.

(3 marks)

Des	cribe the	e nature (of the ima	ge by com	paring it t	o the objec	t.	
								(2 marks)
