Answers	Additional Comments/Guidance	Mark
<p>Pattern shows: Maximum at start and shows minimum of zero ( never negative)✓</p> <p>Correct periodicity zeros/maxima 180° apart✓ (ie angles in right places)</p> <p>Curvature rather than spikes ie  ✓  ×</p> <p>(The graph should fall to zero – (NB First and last parts should ideally be curved not as illustrated here)</p>	<p><b>If negative then can get second mark only</b> Assume that bottom of graph grid is zero unless otherwise stated</p> <p>Must be numbers on x-axis Ignore if graph shows what happens beyond 360</p> <p>If only one minimum shown then loses this mark Allow if shown starting at zero Freehand sketch so allow if clear attempt to show curvature in most of sketch or arches</p>	<p>3</p>

(b)

<p><u>Correct substitution</u> leading to a calculation of the speed of electromagnetic wave.</p> $\frac{1}{\sqrt{(4\pi \times 10^{-7})(8.85 \times 10^{-12})}} = 3.0 (2.9986) \times 10^8 \text{ m s}^{-1}$ <p>Comment that this speed agrees with the <u>measured</u> speed of light Or speed determined from <u>experiments</u> <u>Or similar to Fizeau's result</u></p>		<p>1</p> <p>1</p>

	Tick (✓) if correct												
Beta particle emission													
Electron diffraction													
Photoelectric effect													
Thermionic emission	✓												

(b)

Use of $\lambda = \frac{h}{\sqrt{2 m E}}$ seen including correct substitution		1
$\lambda = 2.4 \times 10^{-11}$ (m)	Condone missing unit	1
Statement to the effect that this is similar to or less than 0.1 nm/atomic dimension/diameter of the atom (so individual atoms can be resolved).	Allow a correct conclusion that follows from an incorrect value of $\lambda$	1

(c)

The mark scheme gives some guidance as to what statements are expected to be seen in a 1 or 2 mark (L1), 3 or 4 mark (L2) and 5 or 6 mark (L3) answer.

Guidance provided in section 3.10 of the 'Mark Scheme Instructions' document should be used to assist in marking this question.

Mark	Criteria	QoWC
6	At least six of the likely statements will be covered to a good standard including at least three from image formation and at least three from quality and detail.	The student presents relevant information coherently, employing structure, style and SP&G to render meaning clear. The text is legible.
5	At least five of the likely statements will be covered to a good standard including at least two from image formation and at least one from quality and detail.	
4	At least three of the likely statements will be covered to a good standard. The response must include one of both image formation and factors affecting quality and detail.	The student presents relevant information and in a way which assists the communication of meaning. The text is legible. SP&G are sufficiently accurate not to obscure meaning.
3	At least two of the likely statements will be covered to a good standard. The response must include one of both image formation and factors affecting quality and detail.	
2	At least two of the likely statements	The student presents

The following statements are likely to be present.

#### Process of Image formation

- Electrons through the middle of the lenses are undeviated
- Electrons on the edges are deflected by magnetic fields toward the axis of the TEM
- The condenser lens deflects the electrons into a wide parallel beam incident uniformly on the sample.
- The objective lens then forms an image of the sample.
- The projector lens then casts a second image onto the fluorescent screen.

#### Factors affecting the quality and level of detail

- Wavelength depends on speed of the electrons
- Lower the wavelength gives greater the detail.
- Emitted electrons come from a heated cathode and therefore have a speed distribution dependent on temperature.
- The speed of the electrons is not always the same which causes different pathways through the lens and so aberration.
- The sample thickness reduces the speed of the electrons increasing the wavelength and decreasing the detail.

Answers	Additional Comments/Guidance	Mark
<p>Weight/gravitational force AND electric/electrostatic force ✓</p> <p>Equal (magnitudes) and opposite directions, AND one direction at least specified ✓</p>	<p>The second mark is conditional on the first.</p> <p>First mark is for naming the two forces. Condone 'electromagnetic' for 'electric' Do not allow field or potential for force. Allow "force due to electric field"; "force due to magnetic field" Penalise additional forces in MP2.</p> <p>The second mark is for the relationship between them. Must include idea of size and direction. e.g. weight down equals E force up/towards positive plate/away from negative plate. Do not allow 'balanced' or 'in equilibrium' for equals</p> <p>The forces can be in the form of formulae for MP1 and MP2 (e.g. <math>Eq</math>, <math>EV/d</math>, <math>mg</math>)</p>	<p>2</p>

(b)

<p><math>m = 4\pi r^3 \rho / 3</math> and <math>mg = 6\pi \eta r v</math> seen ✓</p> <p><math>r^2 = 18 \eta v / 4 \rho g</math> is seen in in some form, in symbols or through substituted data, ✓</p> <p>Correct use of equations to obtain <math>r = 9.7 \times 10^{-7} \text{ m}</math> ✓</p>	<p>Do not allow backward calculaton</p> <p>Can be seen by substitution. Can be seen in single equation: <math>4\pi r^3 \rho g / 3 = 6\pi \eta r v</math></p> <p>Do not award if v and V confused</p> <p>Do not condone 1sf answer. Must be clear answer refers to r, not <math>r^2</math> for example.</p> <p>If no other mark given MP1 can be awarded if F used for mg, and/or volume AND density equations seen separately</p>	<p>3</p>
--	---	----------

(c)

<p>The number of excess electrons on the droplet is 3 ✓</p> <p>In order for each half to remain stationary, the charge would have to split equally OR Due to the quantisation of charge, the charge cannot split equally ✓</p> <p>It is not possible for both droplets to remain stationary / the student is wrong ✓</p>	<p>May be seen in terms of values of charge or e Award for idea that charge would have to be 1.5e</p> <p>Evidence for MP1 and MP2 may be seen together. E.g. charge on drops are e and 2e, OR <math>1.6 \times 10^{-19}</math> and <math>3.2 \times 10^{-19}</math></p> <p>Ignore reference to particles repelling each other</p>	<p>3</p>
